

Finance Flow Questionnaire

Purpose: Confirm how the finance process actually runs today — quotation → invoice → procurement → dispatch → maintenance — so it can be mapped correctly into the ERP system.

1 Quotation & Approval

3 questions

- 1 Who is allowed to approve a quotation — Finance only, or also Operations? Does the approval authority depend on the quotation value?
- 2 What should happen if a quotation needs to change after approval (price, dates, quantity) — edit it, or cancel and re-quote?
- 3 At what point is a job "confirmed" for Finance — quotation approval, a customer PO, or an advance payment?

2 Invoicing

4 questions

- 4 When is the invoice actually created — right after quotation approval, when equipment is dispatched, or at job completion?
- 5 Can one job / quotation ever need more than one invoice (partial or milestone billing), or is it always one invoice for the full amount?
- 6 Does an invoice need internal sign-off before it is sent to the customer?
- 7 How do you fix a wrong invoice today — edit it, or cancel and issue a new one / credit note?

3

Customer Payments

3 questions

- 8 Do customers ever pay in advance or in instalments, or is it always one full payment against the invoice?
- 9 What payment methods do you need the system to track (bank transfer, cash, cheque, online)?
- 10 What is your process for overdue invoices — who follows up, and after how long?

4

Procurement (for items not in your own fleet)

3 questions

- 11 When Finance approves a purchase, what are they checking — budget, vendor price, both?
- 12 Once goods are received from a vendor, is there a separate vendor-invoice / payment step, or is it treated as a simple recorded expense?
- 13 Do purchases need to stay within a project or job budget? Should the system block or warn if a purchase would exceed it?

5

Dispatch & Maintenance

2 questions

- 14 Does maintenance on equipment get tracked as a cost against the job / project, or is it handled separately from job finances?
- 15 Should equipment maintenance history or cost feed into project profitability, or is it tracked purely for fleet upkeep?

6

Reporting

1 question

- 16 Which reports does Finance actually need day-to-day or month-end (e.g. outstanding receivables, expenses by category, project profitability)?

- 17 Do you have budgets per project? Per department? An annual company budget? Or none at all today?
- 18 If project budgets exist — who sets them, when, and is it one total figure or broken into categories (equipment, procurement, transport, labour)?
- 19 When a purchase request would exceed the project budget, should the system: (a) block it entirely, (b) allow it but require a higher-level approval, or (c) show a warning only?
- 20 Who can approve a budget increase, and are there value thresholds (Finance Manager up to X, GM above Y, MD above Z)?
