

BUSINESS REQUIREMENTS DISCOVERY

Finance Module

ERP System — JTCops / KWOPS

Prepared by: ERP Development Team

Date: 21 July 2026

For: Finance Department

This document explains how the ERP works today and asks the questions we need answered before building the Finance module.

OVERVIEW

Why This Document Exists

The ERP system handles the full business cycle — from a customer enquiry through to project completion. The **Finance screens are built**, but none of the rules behind them have been coded yet. Before we write a single line of logic, we need Finance to tell us exactly how the company works.

 **What we need from you:** Read through this document, understand how the system currently works, then answer the questions at the end. Your answers become the blueprint we use to build the Finance module.

What is already working

Sales creating requirements and quotations ·
Quotation approval by Finance · Dispatching equipment · Procurement requests, purchase orders, goods receipt · Vendor management

What is NOT yet built (Finance area)

Invoice rules and lifecycle · Proforma invoices ·
Budget management · Vendor payment workflow ·
Customer credit & payment allocation · Accounting entries · All financial reports

ROLES IN THE SYSTEM

Who uses the ERP today

The system has 9 roles. Finance currently has one role — "Finance Officer" — and we need you to tell us if more roles are needed.

Role	What they do in the ERP	Touches Finance?
Sales Executive	Creates requirements & quotations, prices jobs in KWD	Indirectly — prices the job
Operations Manager	Reviews requirements, can approve quotations	Can approve quotations
Procurement Manager	Raises purchase requests, issues purchase orders	Submits for Finance approval

Role	What they do in the ERP	Touches Finance?
Warehouse Operator	Receives goods, manages equipment inventory	Goods receipt triggers costs
Dispatch Coordinator	Assigns drivers & equipment, tracks delivery	No
Finance Officer	Approves quotations & procurement, creates invoices, records expenses	Primary Finance role
Maintenance Engineer	Records maintenance jobs on equipment	No
Head of IT / Admin	System management	No

SECTION 2

How a Job Works — End to End

This is the main flow from the moment a customer enquires until the job is done and paid. Steps highlighted in **yellow** are Finance steps.

Dispatch Coordinator assigns a driver and equipment. Status moves: Pending → Assigned → In Transit → Completed.

8

★ Finance Creates Invoice

Finance Officer manually creates an invoice from the approved quotation. The customer and amount are pre-filled from the quotation. Finance sets the issue date, due date, and sends it to the customer.

Document: Tax Invoice (INV-XXXX) — Draft → Sent

9

★ Finance Records Payment

When the customer pays, Finance clicks "Mark as Paid" and records the payment method.

Currently: one full payment only. No partial payments, no receipts issued.

Invoice status → Paid

10

Job Completed

Equipment returned, dispatches marked Completed, Requirement marked Completed. There is no formal financial sign-off on closure today.

 Sales  Operations  Finance   Procurement  Warehouse / Dispatch  System (automatic)

⚠ **Key gap:** Today there is no Proforma Invoice step, no advance payment, no milestone billing, and no formal project close. The questions at the end ask you to define these steps.

SECTION 3

What Finance Can See in the ERP Today

The Finance section has five tabs built. Here is what each one does and what is missing from it.

Tab 1 — Customer Invoices

Create, view, and manage invoices to customers

Partial

Works today: Create invoice from an approved quotation, see Invoice ID / Customer / Amount / Status, download PDF, mark as paid.

Missing: Proforma invoice, partial payments, payment allocation, credit notes, invoice approval workflow, automatic overdue detection, invoice numbering rules.

Draft → Sent → Paid / Overdue / Cancelled

Tab 2 — Lease Invoices

Track what we owe vendors for leased equipment (e.g., we lease a crane from a vendor, we pay them monthly)

Partial

Works today: Record a lease invoice for a period, auto-calculate amount (days × daily rate), expiry alerts (red = expired, orange = expiring in 14 days).

Missing: No formal payment approval, no AP workflow, no auto-generation of recurring invoices.

Tab 3 — Procurement Expenses

Record what we spend on purchases

Partial

Works today: Log an expense with category (Equipment, Fuel, Maintenance, etc.), amount, payment method, and optionally link to a Purchase Order.

Missing: No vendor invoice registration, no 3-way matching (PO ↔ delivery ↔ invoice), no payment approval workflow.

Tab 4 — Assets

Register fixed assets and track depreciation

Partial

Works today: Add asset (name, category, value in KWD, purchase date, depreciation rate %).

Missing: No depreciation posting, no disposal workflow, no auto-link from procurement.

Tab 5 — Z Report (Period Summary)

On-demand PDF showing total billed, collected, outstanding, expenses, and equipment status

Built

This is the only report currently available. Finance needs to tell us which formal reports are required (P&L, AR aging, project profitability, etc.).

SECTION 4

What Does Not Exist Yet

These are the major Finance features that still need to be built. We need your answers to build them correctly.

Feature	Current situation	We need Finance to tell us
Proforma Invoice	Not built	Do you use one? Who creates it? When? Is advance payment requested against it?
Partial / milestone invoicing	Not built	Do you bill in stages (e.g., 40% upfront, 40% progress, 20% completion)? Or one invoice at the end?
Advance payment	Not built	Do customers pay in advance before we start? How is it tracked and adjusted off the final invoice?
Retention billing	Not built	Do you hold back a % (e.g., 10%) and bill it later? What triggers release?
Partial payments	Not built	Can a customer pay in instalments? How do we allocate a payment across multiple invoices?
Credit Note / Debit Note	Not built	When do you issue a credit or debit note? Who approves? How is it linked to the original invoice?
Budget management	Not built	Do projects have budgets? Who sets them? Should the system block a purchase that exceeds budget?
Vendor invoice & payment workflow	Not built	When a vendor sends us an invoice, what do we check, who approves it, how and when do we pay?
Customer credit management	Not built	Do customers have credit limits? Payment terms (Net 30)? What happens when they are overdue?
Project financial closing	Not built	Is there a formal Finance sign-off before a project can be closed? What must be complete first?
Financial reports	Z Report only	Which reports do you need (P&L, AR aging, project profitability)? How often? For whom?

Feature	Current situation	We need Finance to tell us
General Ledger / accounting	Not built	Do you use an external accounting system today? Should the ERP post entries, or is the ERP the accounting system?
Tax configuration	VAT entered manually	What tax rules apply to our business in Kuwait? Rates? Which services are taxable?

SECTION 5

Questions for the Finance Team

Please answer these questions as fully as possible. Attach any sample documents you have (real invoices, credit notes, payment vouchers) — they are the fastest way for us to get formats right. Where something does not apply, just write "N/A".

A — How Business Works Today

Understanding your current process before we replicate it

- 1 Walk us through what happens today, outside the ERP, from the moment Sales wins a job until the money is in the bank. Which steps are on paper, in Excel, or in a separate system?

Your answer here...

- 2 Do you use an accounting software today (QuickBooks, Sage, Xero, custom)? Should the ERP replace it, or feed data into it?

Your answer here...

- 3 At what point is a job "confirmed" for Finance — when the quotation is approved, when the customer sends a Purchase Order (LPO), or when an advance payment is received?

Your answer here...

Why we ask: this determines when financial commitments are recorded and when it is safe to order equipment.

- 4 Do you require the customer to send a formal Purchase Order / LPO before work begins? Should the ERP store it?

Your answer here...

- 5 What is the very first financial document Finance creates for a new job, and when?

Your answer here...

B — Invoice Process

- 6** Do you issue a Proforma Invoice? If yes — who prepares it, who approves it, when is it sent, and does the customer need to pay against it before work starts?

Your answer here...

- 7** When exactly is the Tax Invoice issued — when the job is confirmed, when equipment is delivered, when the job is complete, or on a fixed date each month?

Your answer here...

- 8** Can one job have more than one invoice? Can you invoice for part of a job (partial invoicing)?

Your answer here...

- 9** Do you use milestone billing? (e.g., 40% on mobilisation, 40% on progress, 20% on completion). If yes, describe a typical split.

Your answer here...

- 10** Do you apply a retention amount (e.g., hold back 10% until the defect period ends)? What triggers the release of the retention and the final invoice?

Your answer here...

- 11** For long rentals (equipment on-site for months), do you invoice monthly, at the end, or by rental period?

Your answer here...

- 12** Does an invoice need to be approved internally before it is sent to the customer? Who approves it, and above what amount?

Your answer here...

- 13** How do you correct a wrong invoice — can you edit it, or must you cancel it and issue a Credit Note?

Your answer here...

- 14** When do you issue a Credit Note or Debit Note? Who approves it? Please attach a sample if you have one.

Your answer here...

- 15** What numbering format do your invoices use (e.g., INV-2026-001)? Does the sequence reset each year? Are gaps ever acceptable?

Your answer here...

- 16** What must legally appear on a valid invoice in Kuwait? (Company registration number, Arabic text, stamp, authorised signature, etc.)

Your answer here...

C — Customer Payments

How money comes in

- 17 What are your standard payment terms for customers (e.g., Net 30)? Do different customers have different terms?

Your answer here...

- 18 Do customers ever pay in advance before the job starts? What percentage, and how is it recorded and deducted from the final invoice?

Your answer here...

- 19 Do customers ever pay in instalments (partial payments)? If they pay a lump sum that covers several invoices, how do you decide which invoice it goes against?

Your answer here...

- 20 What payment methods do you accept (bank transfer, cheque, cash, card)? Do you track post-dated cheques, and what happens if a cheque bounces?

Your answer here...

- 21 Do you issue a formal receipt to the customer for every payment? Please share the format.

Your answer here...

- 22 Describe your payment reminder process — when do you chase overdue invoices, who does it (Finance or Sales), and what are the escalation steps?

Your answer here...

- 23 Do you charge late payment penalties or interest? Who can waive them?

Your answer here...

- 24 Do customers have credit limits? Who sets and approves them? Should the system warn or block Sales when a new job would push a customer over their limit?

Your answer here...

D — Vendor Payments (Accounts Payable)

How money goes out to suppliers

- 25 When a vendor sends us an invoice, what do you check it against — the Purchase Order, the delivery note, or both? What happens when the price or quantity does not match?

Your answer here...

- 26 Who approves a vendor invoice for payment? Are there approval thresholds (e.g., under KWD 500 Finance Officer approves, above KWD 5,000 Finance Manager or GM)?

Your answer here...

- 27 Do you pay vendors on a schedule (weekly payment run?) or per the due date on each invoice? Do you take advantage of early payment discounts?

Your answer here...

- 28 Do you ever pay vendors an advance or deposit against a Purchase Order before goods arrive? How is it tracked and settled?

Your answer here...

- 29 What payment methods do you use for vendors, and do you issue payment vouchers or remittance advices?

Your answer here...

E — Budgets

Do budgets exist, and how do they work?

30 Do you have budgets per project? Per department? An annual company budget? Or none at all?

Your answer here...

31 If project budgets exist — who sets them, when, and is it one total figure or broken into categories (equipment, labour, transport, procurement)?

Your answer here...

32 When a purchase request is submitted that would exceed the project budget, should the system: (a) block it entirely, (b) allow it but require a higher-level approval, or (c) just show a warning?

Your answer here...

33 Who can approve a budget increase, and are there value thresholds (Finance Manager up to X, GM above Y)?

Your answer here...

F — Approvals & Roles

Who can do what, and who approves what

- 34 List the people in the Finance team and what each person is allowed to do (create invoices, approve payments, post journal entries, close a period).

Your answer here...

- 35 Do you need separate ERP roles such as: Finance Manager, Accountant, Accounts Payable, Accounts Receivable, Cashier? What is each allowed to do?

Your answer here...

- 36 Are there tasks where the same person must NOT both create and approve (segregation of duties)? For example, the person who raises a payment request should not also approve it.

Your answer here...

Why we ask: this is a key audit and compliance requirement.

- 37 Complete this table with the approval thresholds you use today (or would like to use):

Document / Action	Up to KWD ____	Up to KWD ____	Above KWD ____
Quotation approval			
Purchase request			
Vendor payment			
Invoice cancellation			
Credit note			
Write-off / bad debt			

- 38 When an approver is on leave, who covers their approvals? Should the system allow formal delegation of authority?

Your answer here...

G — Tax & Accounting

Rules that affect every number in the system

- 39 What taxes currently apply to our sales and purchases in Kuwait? What are the rates? Are any services zero-rated or exempt?

Your answer here...

- 40 Do you ever invoice or receive payment in a currency other than KWD? Do any vendor invoices come in USD or another currency?

Your answer here...

- 41 Should the ERP maintain a General Ledger (chart of accounts, journal entries), or just track transactions and export them to your accounting software?

Your answer here...

Why we ask: this is the single biggest architectural decision for the Finance module.

- 42 Please share your Chart of Accounts, or at least the main categories you use (Revenue, AR, AP, VAT, Assets, Expenses).

Your answer here...

- 43 Describe your month-end process — what must be complete before you close a month, and what would you like the ERP to check or enforce?

Your answer here...

- 44 How is depreciation calculated today (straight-line? declining balance?) and how often is it posted?

Your answer here...

H — Reports

Tell us what reports you need, how often, and who sees them

45

For each report below, tick if you need it, note the frequency (daily/weekly/monthly), and who receives it:

Report	Needed?	Frequency	Audience
Profit & Loss			
Balance Sheet			
Cash Flow Statement			
Budget vs Actual			
Outstanding Receivables (AR)			
Receivables Aging (30/60/90+ days)			
Outstanding Payables (AP)			
Vendor Spend Report			
Customer Revenue Report			
Project Profitability (revenue vs cost per job)			
Expense Report by Category			
VAT / Tax Return Support			

I — Exceptions & Edge Cases

The messy situations that happen in real life

46

What happens when a customer disputes an invoice — do you freeze further work for them, put the invoice on hold, or handle it case by case?

Your answer here...

- 47 What happens when a project is cancelled after work has started — do you charge a cancellation fee? What if procurement has already been ordered?

Your answer here...

- 48 When does an outstanding customer balance become a "bad debt"? Who approves writing it off, and what is the process?

Your answer here...

- 49 What are the most common "messy situations" Finance deals with that we have not covered above? Describe them so we can build the right exception handling.

Your answer here...

- 50 What manual tasks take the most time each week? (These are our best automation targets.)

Your answer here...

KWOPS ERP — Finance Module Requirements Discovery

Version 1.0 · 21 July 2026 · Prepared by ERP Development Team

Please return completed document to the development team so we can begin building.
